SAFETY HOIST RINGS

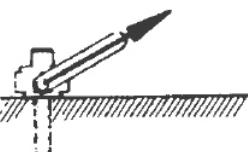

ADB® Hoist Rings Versus Eyebolts Under Load

ANGULAR LOADING CAN CAUSE EYE BOLTS TO FAIL

Angular loads applied to a conventional eye-bolt cause the bolt to fail due to shear forces.

ANGULAR LOADING IS WELL WITHIN THE DESIGNED LIMITS OF THE SAFETY HOIST RING

The same load applied to an ADB® Hoist Ring is translated into a primary tension load at the screw and does not result in the bolt failure when loaded within the working load limit.

Use Hoist Rings for Added Lifting Safety

Side or angular pulling forces can cause eyebolts to twist, bend or break when heavy, angular, unbalanced loads are involved.

ADB® Hoist Rings vs Eyebolts

Thread Size	ADB Heavy Duty Hoist Rings		
	Rated Load Capacity (Lbs)		
	Straight Pull	45 degree lift	90 degree lift
1/4"-20	550	550	550
5/16"-18	800	800	800
3/8"-16	1000	1000	1000
1/2"-13	2500	2500	2500
5/8"-11	4000	4000	4000
3/4"-10	5000	5000	5000
7/8"-10	8000	8000	8000
1"-8	10000	10000	10000
1 1/4"-7	15000	15000	15000
1 1/2"-6	24000	24000	24000

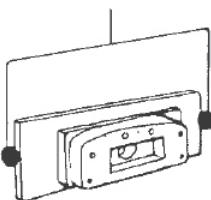

Thread Size	Shoulder Eye Bolt		
	Rated Load Capacity (lbs)		
	Straight Pull	45 degree lift	90 degree lift
1/4"-20	480	144	Not Recommended
5/16"-18	800	240	Not Recommended
3/8"-16	1200	360	Not Recommended
1/2"-13	2200	660	Not Recommended
5/8"-11	3500	1050	Not Recommended
3/4"-10	5200	1560	Not Recommended
7/8"-10	7200	2160	Not Recommended
1"-8	10000	3000	Not Recommended
1 1/4"-7	15200	4560	Not Recommended
1 1/2"-6	21400	6420	Not Recommended

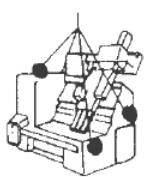

THE STANDARD OF PERFORMANCE

Designed in accordance with the highest safety standards. ADB®'s Safety Hoist Rings provide the kind of safety that protects hoist ring users and material against accidents before they occur. Accidents frequently occur when eyebolts break or lifting hooks disengage. Safety Hoist Rings will not yield to heavy side loads within their rated capacity. Unlike eyebolts, the Hoist Ring pivots 180° and swivels 360° to compensate for pitch, roll and sway when lifting heavy unbalanced loads.

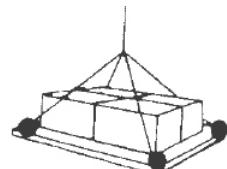

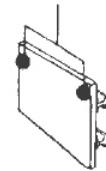

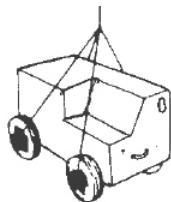

Replaces conventional eyebolts for maximum lift safety in a wide variety of applications

Large Dies and Fixtures

Heavy Machinery

PLATING OPTIONS

ADB® recommends that you select the plating option that is best suited for your specific application. Please contact our engineering department for further information including plating options not listed.

Electroless Nickel

Black Oxide
(comes standard)

Cadmium

Clear (Blue) Zinc

**Yellow Zinc
Chromate**

Titanium-Cadmium

HEAVY DUTY® SAFETY HOIST RINGS

DO NOT BE FOOLED!

Heavy Duty® Safety Hoist Rings has set the new standard for safety lifting products. Made from forged high strength alloy steel, the one piece body and shouldered d-ring eliminates shoulder pins. ADB®'s Heavy Duty® Hoist Ring has 6 assembly parts versus 10 parts on other lifting devices and fewer components means savings and added safety for hoist ring users.

Heavy Duty® Hoist Rings are stronger than competitive lifting devices. They provide better value while providing the quality and safety expected from the leader in safety lifting products.

All ADB® products are subjected to critical non-destructive testing. Users can trust in the reliability and safety of the "Only" Heavy Duty® Hoist Ring.

⚠️ WARNING

General Hoist Ring Safety and Installation Guidelines

Improper use of ADB® lifting devices could result in personal injury, damaged equipment, or death. **In order to ensure maximum safety, please read and understand the following ADB® safety guidelines prior to using any ADB® lifting device.**

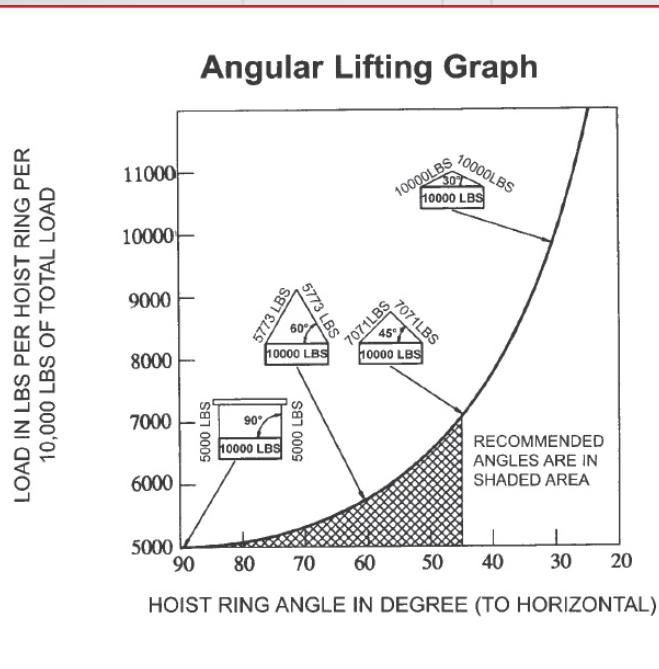

1. **IMPORTANT!!** The force on each hoist ring is not just the total weight divided by the number of hoist rings. The force can be greater at lower lift angles. See example below:
2. Never exceed the rated load capacity (except when proof testing) of the hoist ring.

$$F = \frac{W}{N \sin A}$$

$$A=65^\circ, F = \frac{4000}{4 \sin 65^\circ} = 1103 \text{ lbs.}$$

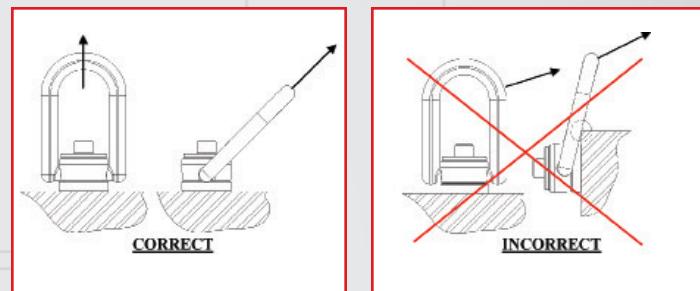

$$A=14^\circ, F = \frac{4000}{4 \sin 14^\circ} = 4134 \text{ lbs.}$$

F = Force on each hoist ring
 W = Total object weight = 4000 lbs.
 N = Number of hoist rings = 4
 A = Lifting angle in relation to horizontal

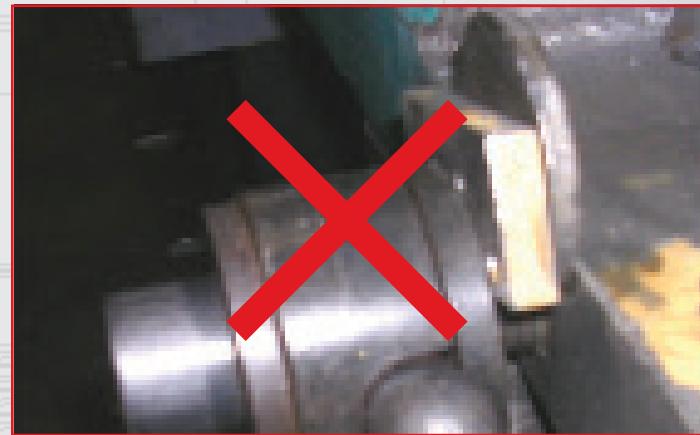

3. ADB® recommends the parent material to have an ultimate tensile strength of least 80,000 psi in order to maintain the full load rating. For lower tensile materials, through hole mounting with a bolt and washer on the opposite side is required. If the user cannot achieve these requirements, contact ADB®'s engineering department for other possible options.

4. Do not allow hoist rings to bind and avoid applying side loads to the bail. Ensure that loads applied are in the same direction of the bail. If necessary, use a spreader bar to avoid binding. See below:

5. The use of free fit spacers should not be used between the hoist ring and the mounting surface. This will reduce the working capacity of the device. See below:

6. Hoist rings should be installed in a manner that allows 360 degrees of rotation and 180 degrees of pivot. Any obstructions within this range will prohibit a safe and proper use of the device. The mounting surface must be flat and smooth for full contact of the device. All ADB® lifting devices are to be installed perpendicular to the surface of the work station. Any lifting device installed at any other angle other than 90 degrees could cause failure to the device and/or damage to the equipment being lifted.

⚠️ WARNING

7. Never lift with any device, such as oversized hooks, chains, or cables, that could cause side loading or damage to the bail. See photo to right:

8. Ensure that the mounting screw/stud is tightened to the recommended torque value (see top of washer). All torque values are based on a dry installation without the use of lubricant. If lubricant is used, contact ADB®'s engineering department for revised torque value.

9. Apply loads gradually to AVOID SHOCK LOADS.

10. Environment:

A. Temperature - When ADB® Swivel Hoist Rings are to be used at temperatures above 400 degrees F (204 degrees C) or below -20 degrees F (-29 degrees C), please consult ADB®'s engineering department for available options. Hoist ring material mechanical properties change when not used within a safe operating temperature and can result in a failure which can cause injury or death.

B. Chemically Active Environments Caution!! The integrity of ADB® hoist rings can be jeopardized by exposure to chemical, caustic, or acidic substances. A change in material properties which reduce the mechanical performance of the hoist ring can occur and can result in a failure which can result in injury or death. Contact ADB®'s engineering department for available options.

Refer to ADB® plating options for the use of hoist rings in chemical, saltwater, or offshore environments, military or aviation operations, or sandy/dry areas

11. Repairs, alterations or modifications to any ADB® lifting device is prohibited unless otherwise specified by ADB®. In the event that the bolt needs to be replaced, use only ADB® certified replacement bolts and installation shall be performed by qualified persons which have demonstrated the ability and are trained to perform bolt replacements. See also ADB Socket head cap screw bolt replacement instructions on the replacement screw page within this catalog.

12. Do not reeve slings from one bail to another, as this can decrease the lifting angle and increase the load per hoist ring.

13. Do not allow hoist rings to bind and avoid applying side loads to the bail. Ensure that loads applied are in the same direction of the bail. If necessary, use a spreader bar to avoid.

Safe

Unsafe
Do Not Reeve

The General Hoist Ring and Installation Guidelines is NOT a substitute for a formal training and education program related to hoist rings and **DOES NOT** intend to provide a comprehensive list of all hoist ring related uses or mis-uses. Formal classroom rigging classes and training is recommended to assist in the development of competent and skilled persons which gain further experience during on the job field applications. Training in specific to ASME B30.26-2015 Sec. 26-2 is recommended. See also www.asme.org

⚠️ WARNING

Improper maintenance and inspections of ADB® lifting devices could result in damaged equipment, personal injury, or death. In order to ensure maximum safety, please read and understand the following ADB® maintenance and inspection guidelines prior to using any ADB® lifting device.

Maintenance

1. When ADB® hoist rings are not being used, they should be stored in a manner that prevents corrosion or damage from occurring.
2. Do not remove the installation and safety tag from the lifting device.
3. The identification of the lifting device should remain legible and maintained by the user during the life of the device.

Inspection

1. Visually examine the lifting device prior to any lifting operation.
2. The frequency of inspection should depend upon the frequency of use, severity of service conditions, and the criticality of the lift.
3. Removal criteria: ADB®'s lifting device should be removed from service if the following conditions exist:
 - A. Missing manufacturers identification and warning tag
 - B. Indications of heat damage
 - C. Corrosion or pitting
 - D. Damaged or missing load bearing components
 - E. Nicks or gouges
 - F. Thread damage
 - G. Evidence of unauthorized welding or modification
 - H. Lack of ability to swivel 360 degrees or pivot 180 degrees
4. If it is suspected that damage has been done to an ADB® lifting device, ADB® offers evaluation services thru magnetic particle testing, tensile testing, and mechanical hardness testing. Call ADB®'s engineering department for more information.

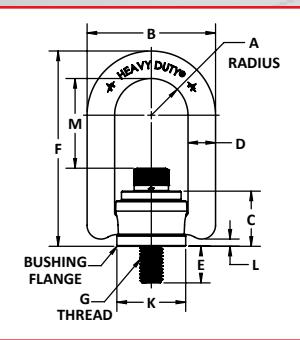

ADB® recommends ADB-Field inspection form to be used for customer inspection programs (available for download @ www.adbhoistrings.com).

⚠️ WARNING

 DO NOT SIDE LOAD	READ PRIOR TO USE AND COMPLY WITH ADB HOIST RING SAFETY AND INSTALLATION GUIDELINES (www.adbhoistrings.com). ONLY TRAINED PERSONS IN THE USE OF SAFE RIGGING PRACTICES SHALL USE THIS PRODUCT. (See ASME B30.26, www.asme.org)
 FLANGE NOT SEATED	INSTALLATION NOTES: Tap thread perpendicular to the mounting surface. Mounting surface should be flat to provide 360° flush seating for the hoist ring. For installation in ferrous materials the bolt should be tightened to the full torque load (+/-10%). ADB® recommends the ultimate tensile strength of the mating material to be a minimum of 80,000 psi. For weaker mating material, if possible, consider using longer bolts or through-hole mounting with a nut and washer on the back side. After installation, validate that the hoist ring swivels and pivots freely in all directions. SAFETY NOTES: (1) NEVER EXCEED WORKING LOAD LIMIT. (2) Visually inspect hoist ring for damage before each use. (3) Check the torque value prior to each use. (4) Apply loads gradually to AVOID SHOCK LOADS. (5) Do not use spacers between the bushing flange and the mounting surface. (6) DO NOT USE OVERSIZED HOOKS OR ATTACHMENT METHODS THAT SPREAD THE BAIL. (7) DO NOT SIDE LOAD BAIL (SEE FIG.). (8) Do not attach guidelines to hoist rings. (9) DO NOT LEAVE GAP BETWEEN BUSHING AND MOUNTING SURFACE (SEE FIG.). (10) Do not interchange ADB® hoist ring components with other manufacturers. Safety information available in multiple languages at www.adbhoistrings.com Support at: 1.800.423.4425 or engineering@adbhoistrings.com

HEAVY DUTY® HOIST RINGS - METRIC

- Material: Forged High strength 4140 alloy steel
- Range of movement: Swivel 360°, Pivot 180° Under Load
- Minimum Design Factor = 5:1
- Meets manufacturing and design requirements of ASME-B30.26 and MIL-STD 209
- Magnetic Particle Inspected Per ASTM 1444
- Black oxide coated
- Each Individually Serial Numbered

† Supplied with stud and nut
• Long Bar Models. Replacement screws are available.

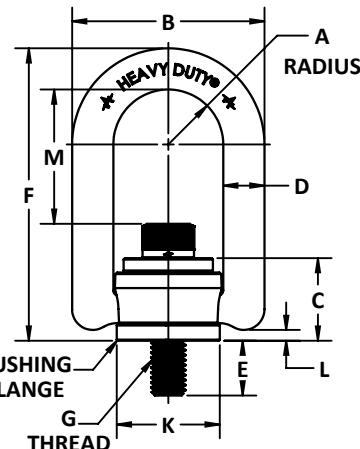

Material: Forged High Strength 4140 Alloy Steel

Design Factor: Minimum Design Factor = 5:1

Specifications: Meets ASME B30.26

Finish: Corrosion Resistant Plating - Electroless Nickel

- Forged High Strength 4140 Alloy Steel Hoist Ring
- Corrosion Resistant Plating - Electroless Nickel (AMS-C-26074 Class 1 Grade B)
- 200% Proof Load Tested
- Individually Serialized
- Other Standard and Metric Sizes Available
- Select Sizes from 550-30,000 lbs
- Swivels 360°, Pivots 180°
- Easily disassembled & reassembled for inspection
- Compiles with ASME-B30.26
- 5:1 Design Factor
- Unlike eye bolts, swivel hoist rings maintain full capacity at 0-90 degrees from the bolt axis.

* Recommended Torque Load

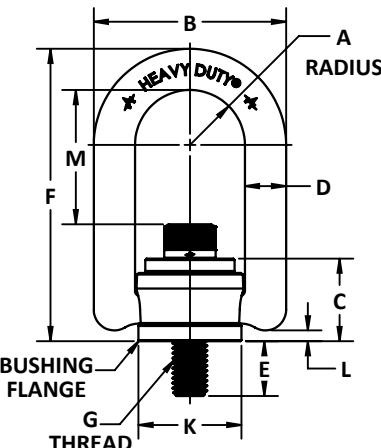

** Plating threads may subject threads to not meet standard thread tolerances

† Supplied with stud and nut

^ The 7,000 lb. W.L.L. when loaded at 90 degrees to the bolt axis, is established with a 4.5 design factor

HEAVY DUTY® HIGH VIS

- Forged High Strength 4140 Alloy Steel Hoist Ring
- Highly Visible Powder Coated Green Bail
- Corrosion Resistant Plated Body, Fastener, Bushing - Electroless Nickel (AMS-C-26074 Class 1 Grade B)
- 200% Proof Load Tested
- Individually Serialized
- Other Standard and Metric Sizes Available
- Select Sizes from 550-55,000 lbs
- Swivels 360°, Pivots 180°
- Easily disassembled & reassembled for inspection
- Complies with ASME-B30.26
- 5:1 Design Factor
- Unlike eye bolts, swivel hoist rings maintain full capacity at 0-90 degrees from the bolt axis

STANDARD

SAFETY ENGINEERED HOIST RINGS

STAINLESS STEEL/METRIC

- Hoist Ring Material: 300 Series Stainless Steel
- Design Factor: 5:1
- Range of Movement: Swivel 360°, Pivot 180° Under Load
- NDT: Liquid Penetrant Tested Per ASTM-E 1417
- Purification Process: Clean & Passivate Per ASTM-A967
- Typical Applications: Use Stainless for Corrosive, Cryogenic or Elevated Temperature Environments
- Each Individually Serial Numbered

EZ-TORQUE® HOIST RINGS

Exclusively from ADB®, the world's largest manufacturer of Safety Hoist Rings

ADB®, the originator and leader in safety hoist rings, introduces another time and money saving innovation.

ADB®'s EZ-Torque® Hoist Ring eliminates the need of locating and using expensive hydraulic tensioners or torque multipliers when installing high capacity working load hoist rings.

For example, a 200,000 lb. WLL Hoist Ring requires the mounting bolt to be torqued to 19,800 lbs-ft. while ADB®'s EZ-Torque® requires only a standard torque wrench and 193 lbs-ft of torque per screw.

HEAVY DUTY® SIDE PULL HOIST RING

- Self-aligning in the direction of the load
- Rotates 360° Under Load
- Minimum of 5:1 design factor in any direction
- Alloy steel, black oxide finish
- Magnetic Particle Inspected Per ASTM 1444

Patent No. 6,953,212

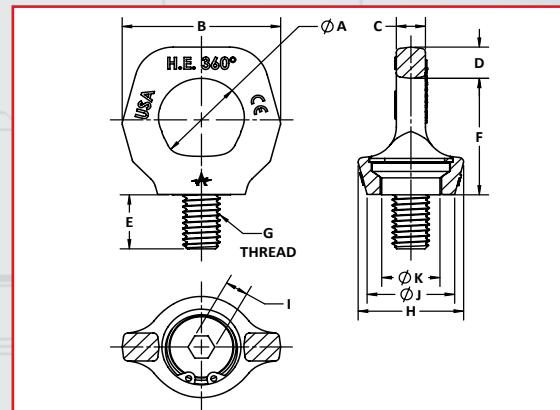

NOT FOR ROTATION UNDER LOAD

H.E. 360°™

The H.E. 360°™ is a revolutionary engineered lifting point which meets the performance requirements and compliance with modern rigging hardware standards such as ASME B30.26. With each being proof tested to 200% of the marked working load limit, the H.E. 360°™ can provide additional assurances related to safe lifting. The design has a 5:1 factor in all angular directions and maintains the same working load limit without a reduction of tool working load limit like common eyebolts. The H.E. 360°™ is easily installed with common size ball end stubby allen wrenches and in cases of having to comply with the marked recommended permanent installation torque (PITQ), an offset tool is available from ADB.

- Design allows for eye rotation **prior** to lifting or load handling activities.
- Effective thread length 1 ½ times the diameter
- WLL and Torque recommendation properly marked.
- Angular loading permissible without reduction of WLL when shoulder flushed to surface.
- Distinctive Green Powder Coated Body
- Corrosion Resistant Plated Body, Fastener, Bushing and Retaining Ring
- Replaceable Mounting Screw
- Special Configurations Available Upon Request
- 200% Proof Load Tested
- Individually Serialized
- Made in USA

SUPER-COIL® HOIST RINGS

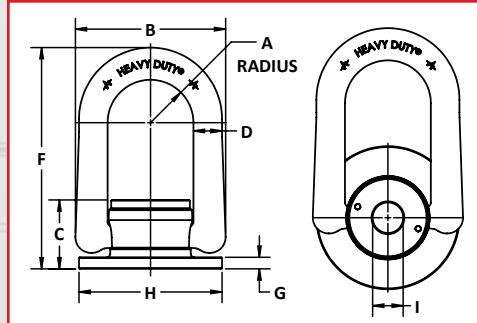

- Alloy Steel, Black Oxide Finish
- Excellent for temporary attachment to steel & construction material
- Range of movement: pivot 180° & swivel 360° to compensate for pitch, pull and sway when lifting unbalanced loads. Load ratings are for lifts in any direction.
- Minimum Design Factor: 5.1
- Magnetic Particle Inspected Per ASTM 1444
- Destructive testing by outside independent laboratories
- ADB® Coil Bolts are included to ensure the integrity of the product

HEAVY DUTY® SWIVEL/PIVOT LIFT PLATE

- Pivots 180°/Swivels 360°
- Material: High strength 4140 alloy steel
- Design Factor: 5:1
- Finish: Black Oxide per Mil C-13924B
- Magnetic Particle Inspected Per ASTM 1444
- **Bolt/Coil insert not included**

Part No.	*Rated Load (lbs)	A	B	C	D	F	G	H	I	Weight (lbs)

36151	49,000	1 1/2	5.25	10.5	15.70

*NOTE: Minimum ultimate load is 6 times the working load limit.

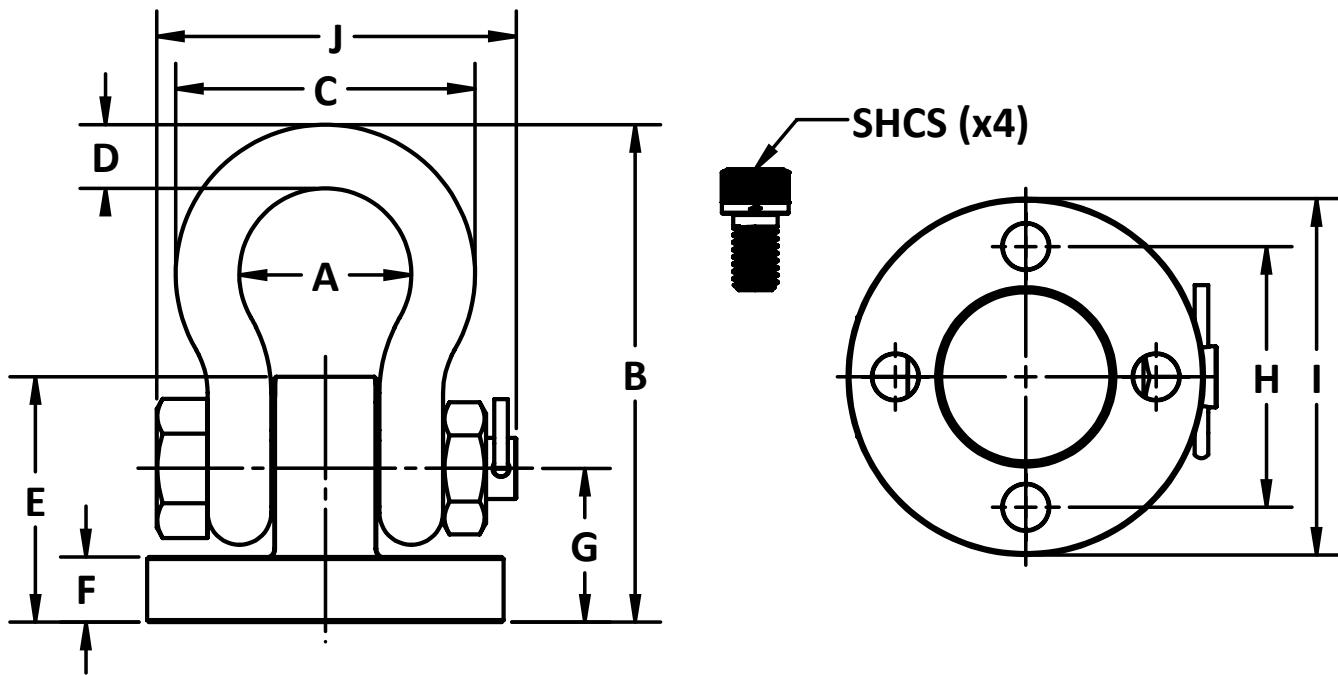

SHACKLE HOIST RINGS

The ADB® Shackle Hoist Ring is used for OEM applications and permanent mounting on dies, molds, fixtures or equipment. Can be bolted or welded in place.

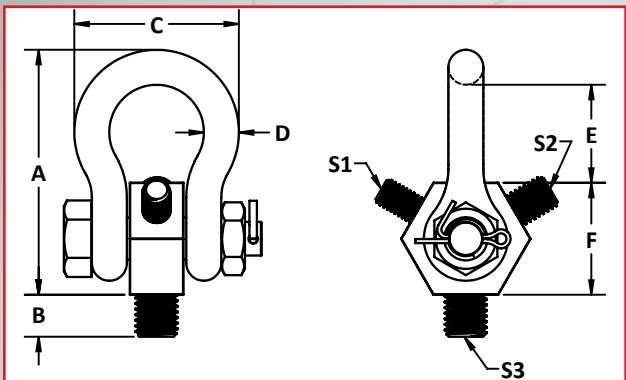

- Domestic Carbon Steel, Black Oxide Finish
- Swivel 360° and Pivot 180° Under Load
- Design Factor = 5.1
- Magnetic Particle Inspected Per ASTM 1444
- Ideal for lifting large and heavy structures

UNIVERSAL LIFT RINGS

A tool used for vertical lifting only

Caution: Do not apply side load

For straight lift only. Listed capacities are maximum safe working load.

Some typical applications for the ADB® universal lift rings are:

1. Large Chucks
2. Milling Cutters
3. Dies
4. Broaches
5. Motors
6. Fixtures
7. Small Machines
8. Machined Parts

- Designed with Patented Safety Engineered Hoist Rings
- 100 Ton System Working Load Limit
- Swivel 360° and Pivot 180° Under Load
- Greatly Reduces Sling Bind
- Adjustable for Universal Fit On Most Towers
- 100% Technical Support from Quote to Final Lift
